
Landscape and smoothing bias
$F(x) = +\infty$ for $x < 0$
$f(x)$ (ignores D)
$F(x)$ on $[0, 1]$
Φ_β, $\beta = 1$
Φ_β, $\beta = 0.25$
Φ_β, $\beta = 0.0625$
Objective
x

All 16 sampled trajectories
Exact x_{β_k}
Solution $x^* = 0$
x_k
$k + 1$

Smoothed objective along trajectories
Early values above 0.2 are clipped
$\min_x \Phi_k = -\beta_k/8$
$\Phi_k(x_k)$
$k + 1$
