FraMES probe-count experiment: metric512_s1000 (512 points)
Product initialization · median and IQR across all three development seeds · lower loss is better
q = 128
q = 1,024
q = 2,048

Markers are saved checkpoints; no interpolated losses. Time panels place each update-count median at its median recorded time.
Final losses: independent FP64 evaluation. Earlier losses: optimizer precision. Time axes exclude exact diagnostics and FP64 validation.
