SHARE-seq: 31,890 paired cells, four A100 GPUs
Fixed transferred constants; three paired stochastic seeds
Smoothed row FW + momentum (sketch gradient, row-sharded)
Transport KL-proximal gradient + momentum (sketch gradient, row-sharded)
Current rounded GW loss (full objective)

Solver wall time + repair of this output (seconds)
Points: recorded checkpoints. Bars: median and IQR across all three seeds.
Lines only connect observed summaries; faint dots show individual seeds.
