Same stochastic gradient oracle and momentum — Product start; 300-second solver budget
q=128; rho(k)=0.3/(k+1)^(1/2); paired instance and seeds
Clean synthetic n=512
Noisy synthetic n=512
BMMC n=1000
Full GW loss at rounded output
Actual solver + output repair time (s)
Rademacher probes drawn
Observed checkpoints only; no interpolation to a common probe budget. Open markers: incomplete population.
Smoothed row FW + momentum (sketch gradient)
Transport KL-proximal gradient + momentum (sketch gradient)
